

The AI agent team

A naming framework for allied healthcare practices — one human name, one acronym, one job.

AVA · ROSA · VERA · REX · CORA

One naming framework, five agents

1

A human first name

Warm, professional, and healthcare-appropriate — it reads like a colleague, not a system.

2

Each letter is the job

The acronym spells out exactly what the agent does. No guessing, no jargon.

3

Instant clarity

A front-desk coordinator or practice manager gets the point in one glance, no onboarding needed.

AVA

Account and Voice Assistant

The original agent — the naming pattern every other agent in the suite inherits.

A — Account

V — Voice

A — Assistant

Rosa

Referral outreach & scheduling assistant

REFERRAL & MEDICAL COORDINATORS

ROSA — lives inside Tebra EMR

R

Referral

O

Outreach

S

Scheduling

A

Assistant

Catches every incoming referral, reaches out to the patient, and gets them on the schedule — before they fall through the cracks.

SAMPLE VOICE LINE

“I caught a new referral in Tebra, reached out to the patient, and got them on the calendar.”

Vera

Visitor engagement & response assistant

PATIENTS VISITING THE SITE

VERA — embedded on the practice website

V

Visitor Engagement

R

Response

A

Assistant

The always-on front door of the website — answering questions and booking visits the moment a patient decides to reach out.

SAMPLE VOICE LINE

“Hi, I’m Vera. Ask me anything, or I can get you booked in right now.”

Rex

Reception efficiency expert

FRONT DESK STAFF & ADMINISTRATORS

REX — runs front-desk workflows

R

Reception

E

Efficiency

X

eXpert

The behind-the-counter teammate who takes the busywork off the front desk so staff can focus on patients, not paperwork.

SAMPLE VOICE LINE

“I cleared the intake queue and flagged two forms that need a signature.”

Cora

Communication outreach & response assistant

PRACTICE MANAGERS

CORA — runs text & phone automation

C

Communication

O

Outreach

R

& Response

A

Assistant

The voice and text line that never misses a call or a message, keeping patients informed without adding to the team's workload.

SAMPLE VOICE LINE

"Confirmed 14 appointments by text overnight — no missed calls."

One system, five distinct hires

- **The pattern is the brand, not the roster.**

Once a buyer meets one agent and decodes the pattern, every other agent explains itself — no re-onboarding needed when a practice adds a second or third hire.

- **Each name still stands alone.**

These are sold and priced as five separate point solutions, so each name, quote, and positioning statement has to work with zero context from the others.

- **Distinct sound, shared logic.**

Rosa, Vera, Rex, and Cora are chosen for sound variety — not rhyme — so each feels like a different hire, not a different flavor of the same one.

- **Never bundle them on one slide for buyers.**

The shared DNA should be something a customer discovers over time, not something announced — announcing it reframes five products as one bundle.

Who else is building this

Landscape as of August 2026

1

Referral outreach — Assort Health, ReferralMD

Same-hour, multichannel outreach with closed-loop updates back to the referring provider.

2

Website chatbot — Hyperleap AI, Conferbot

Multilingual intake, plus PT-specific engagement that continues past booking.

3

Front desk — Weave / TrueLark, Vascue

Weave leads on adoption; Vascue is allied-health-specific, but built on Cliniko / Nookal, not Tebra.

4

Text & phone — Weave / TrueLark, Virtual CA

After-hours voice coverage, and one continuous thread as a patient moves from chat to text.

What's working across the market

- **Multichannel outreach**

Voice + text + email cascade, not one channel.

- **Closed-loop updates**

The referring provider is notified automatically as status changes.

- **Thread continuity**

Chat, text, and phone share one memory of the conversation.

- **Fast onboarding**

Reads existing scripts and documents instead of requiring a rebuild.

- **Full-context handoff**

Staff see the whole conversation the moment they're needed.

- **Post-booking engagement**

Care continues after the appointment is booked, not just up to it.

The whitespace

No one owns the full lifecycle

Every competitor found sells a single point solution — a scribe, or a chatbot, or a receptionist — or a faceless enterprise workflow platform with generic, unnamed modules. Nobody has packaged the referral-to-scheduled-to-communicated lifecycle as one coherent, memorable system the way this suite does.

Allied health on Tebra is underserved

Vascue is the only AI front desk built specifically for allied health — but it runs on Cliniko and Nookal, not Tebra. The stronger, better-funded players (Assort Health, Weave, Sully) build for general medical or enterprise health systems, not PT, OT, speech, or chiropractic. Tebra-based allied health practices currently have no dedicated, allied-health-fluent AI team built for them.

Concrete improvements to build in

Rosa

- Voice/text/email cascade, not one channel
- Closed-loop updates back to the referring provider

Vera

- Multilingual auto-detect
- Post-booking engagement — forms, home programs

Rex

- Ingests existing scripts/SOPs on setup
- Full-context handoff the moment staff step in

Cora

- Shares Vera's thread — one conversation memory
- Texts back within seconds of a missed call

Suite-level edge

One shared patient memory across all five agents — no competitor has stitched referral, chat, front desk, and comms into a single continuous thread.

Five agents. One framework. Zero confusion.

Next: lock voice guidelines for each agent and sequence the rollout.
